Not to scale

V Series envelopes incorporate eight vertical gores. Each gore is built-up from a number of nylon panels which are identified by letters. The row of panels around the base of the balloon, immediately above the fire resistant Nomex mouth, are 'A' panels. 'A' is followed by 'B' with the series continuing upwards. The number of panels varies from 14 (V-56) to 17 (V-90). The location of the equator also changes, and this, together with the highly curved shape of the Viva gores, should be taken into consideration when planning any artwork.

To help plan your colour scheme and artwork position accurately we have included three design charts on this sheet. They cover sizes 56 / 65, 77 and 90. Please complete the correct chart, including parachute. Design charts for sizes V-20, V-31 and V-42 are available on request.

There is no extra charge for change of fabric colour at any of the lines shown on the chart if the colours are from the standard Cameron range.
